

Missile Technology Control Regime

Georgina Sargison, NZ's MTCR Coordinator

MTCR membership:

35 countries from all around the world

What is the MTCR?

- Informal political understanding aimed at preventing the proliferation of missiles capable of delivering WMD
- Focusses on means of delivery rather than the WMD themselves

How do we achieve our goals?

- Framing and implementing export controls
- The MTCR Guidelines and Technical Annex represent key pillars of the Regime
- MTCR standards represent international best practice
- Dialogue and information exchange

Engagement with others

Importance of outreach and cooperation including with non-members

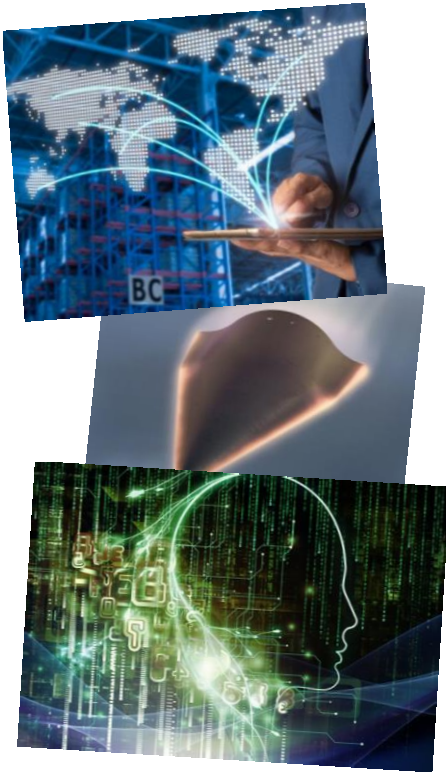

Current focus

- Sharing info about global missile proliferation activities
- Exchanging views on how to effectively address evolution of procurement strategies and implication of technological changes on our work
- Boosting outreach to promote wider awareness of the dangers of missile proliferation and support others to improve export control standards

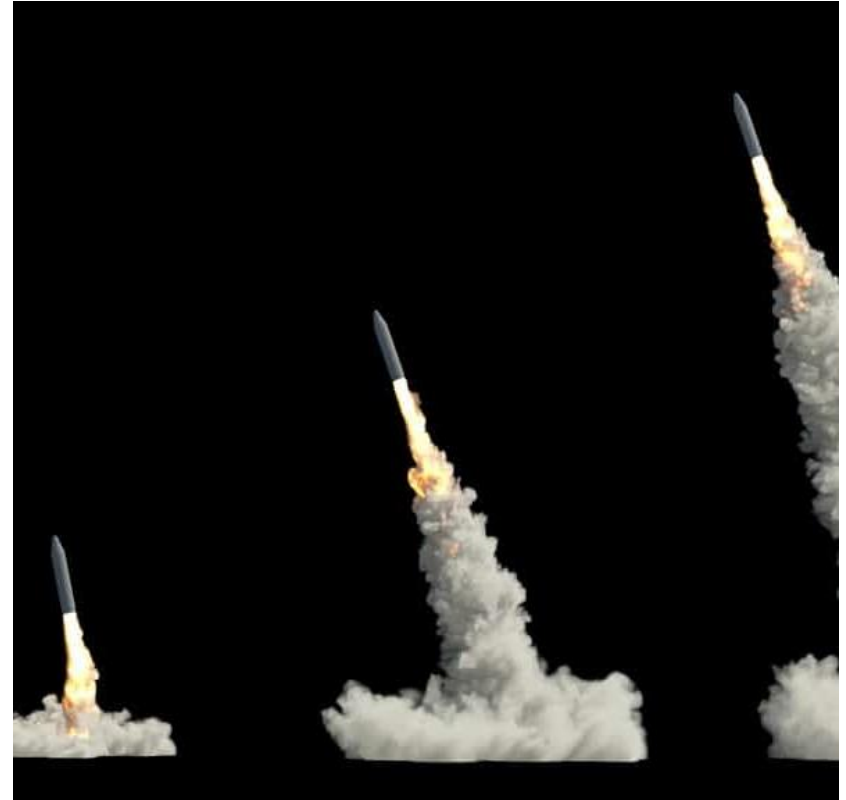

Challenges

- Ongoing technological change and ensuring that controls remain effective
- Need to engage with non-traditional actors to raise awareness and effectively implement controls

Value of the MTCR

- MTCR has proven to be an effective multilateral non-proliferation mechanisms.
- Membership allows partners to play an active role in curbing global missile non-proliferation threat and set international standard for
- Partners also benefit from information exchange and access to best practice

Adherence

- The MTCR also invites non-members to declare adherence to the Regime. This provides access to some MTCR meetings and presentation materials, as well as opportunities to engage with the MTCR Chair for briefings on developments.
- We believe that this status helps states improve implementation of missile-related export controls and materially contribute to international non-proliferation outcomes.
